Summary

Specializing in end-to-end development of user-centric products, I oversee the complete lifecycle from conceptualization and feature roadmap planning to **high-fidelity UI design** and **scalable systems architecture**. My portfolio includes the delivery of enterprise-grade solutions, such as a curated platform for design resources and a sophisticated resource allocation tool, emphasizing automation and iterative product enhancement.

Projects

Casp | Next.js, tanstack, Typescript, Go, Electric SQL, Redis

[Github](#)

- **live workforce dashboard** that **updates instantly** and **keeps data synced across** all users by using Electric SQL and TanStack React DB to stream database changes directly to the browser.
- Designed a **flexible onboarding flow** that lets different companies customize their own forms without writing any new code by reading settings from a PostgreSQL database to build the forms dynamically in React.
- Built a **fast spreadsheet importer** that lets users upload large Excel files in seconds without slowing down the website by creating a background service in Go that reads and saves the data directly.
- Set up user **login and access controls** that keep each company's data private and secure by using secure authentication services and database row-level security policies.

Design Index | Astro, Typescript, Redis

[Website](#) | [Github](#)

- Built a curated collection of high-quality design resources, growing it to **1,000 monthly views**, with a **domain rating of 11**
- Built an **NLP-powered search engine** that ranks tools by keyword relevance, using Wink NLP on the client and a PostgreSQL function for matching.
- Added a **multi-layer caching system** with Redis and Vercel to cut API response times and reduce database calls.
- Created an **image optimization pipeline** that serves resized, auto-formatted images through a custom Cloudflare CDN proxy.
- Implemented **AI-agent support** so LLM crawlers can read the site natively, using HTML-to-Markdown conversion, llms.txt, and WebMCP tool registration.

Tech stack

Languages - JavaScript, TypeScript, Python, Go, Java, C
Frontend - ReactJS, Next.js, Astro, Tailwind CSS, HTML5, CSS3
State and Data - Zustand, Tanstack (Query), Tanstack (DB), ElectricSQL
Backend and DB - PostgreSQL, MySQL, Redis, REST APIs
Tools and Design - Figma, Paper

Achievements

Published an article of a tech product on medium that got 4000 views and 500 reads

Education

Manipal Institute of Technology
Bachelor of Technology in Computer Science and Engineering
CGPA: 8.45/10

Bengaluru, India
Aug 2024 - Present
